

Profiling accuracy vs sequencing depth (OPAL, species rank)

Bray-Curtis distance · lower is better

F1 score · higher is better

—●— RaPDTTool screen —●— MetaPhlAn4 —●— Kraken2 16 GB ◆ equal-coverage control (30 M)
—●— RaPDTTool full —●— Kraken2 full —●— Kraken2 8 GB

Uneven community, fixed composition; depth is the only variable. RaPDTTool screen tracks the gold standard closely (Bray-Curtis ~0.05); MetaPhlAn wins F1 through precision while recovering half the species. Unfiltered profiles.
